

DAP Technologies and Identica Partner to Secure the Nation's High Security Areas Handheld Computers Will Allow Instant Enrollment and Mobile Security Checks

Apr 28, 2009 09:00 ET

TAMPA, FL--(Marketwire - April 28, 2009) - Identica Holdings Corporation, the premier provider of end-to-end Hand Vascular Pattern Recognition (HVPR) biometric security solutions, today announced its partnership with DAP Technologies, provider of rugged, highly customizable mobile computing solutions for challenging environments, to develop a wireless handheld solution for the instant enrollment into an existing biometric security system, and to allow security personnel the freedom to conduct random credential checks anywhere in a secure facility.

These new rugged handheld units will incorporate state-of-the-art identity management software for a complete end-to-end solution for first-response situations and high-security areas.

"Identica has proven itself as the leader in innovative security solutions. Partnering with them to develop these units was a natural fit," said Len Schalkwyk, vice president at DAP Technologies. "We are working to produce a mobile security solution that will reduce the risk of unauthorized entrances in highly sensitive areas."

Identica's Mobile Identity Manager software, formerly Enterprise Air, will allow DAP's rugged handheld computers to interface with most PAC systems to retrieve the data that ensures an ID-holder is enrolled into the system. The computers would be deployable in such high-security areas as seaports, airports and government facilities, where the need to quickly identify personnel and verify their credentials is crucial.

"The solution developed with DAP will combine the premier handheld solution with next-generation biometric technology to provide the industry with the best of both worlds, while complementing Identica's existing product set of fixed readers and identity management products," said Terry Wheeler, president of Identica. "DAP Technologies' experience in engineering rugged, lightweight computers allows us to expand our product base into places and markets that were not available previously."

About DAP Technologies

DAP Technologies, based in Quebec City, designs and manufactures rugged handheld and mobile computers for a range of demanding industries and harsh environments. DAP's computers improve data collection, processing and transmission in a variety of industries, including parking, utilities, field service, emergency services, public safety, transportation and logistics. DAP has an office and service centre in Abingdon, U.K. and is an affiliate of U.S.-based RMT, Inc. For more information, visit www.daptech.com.

About Identica Holdings Corporation

Identica Holdings Corporation is the premier provider of end-to-end Hand Vascular Pattern Recognition (HVPR) biometric security solutions. Identica's superior vascular pattern recognition technology verifies and recognizes human users by utilizing a near infrared camera and patented algorithms to capture images of veins, arteries and capillaries found on the back of the human hand. The identity security solutions offered by Identica's operating subsidiaries are provided by resellers and security integrators throughout the Americas, Western and Eastern Europe, and portions of the Middle East. Identica is currently privately held. Major investors include eRoomSystems Technologies, Inc. (OTCBB: ERMS). Please visit Identica at <http://www.identicacorp.com>.
