

Duros and Supply Chain Services Win Service and Sales Contract with Ports America

TEMPE, Ariz. (Jan. 18, 2010) — Duros, a provider of fully rugged and highly customizable computer hardware solutions, has been contracted by Supply Chain Services (SCS) to provide service and new equipment for Ports America, the largest terminal operator and stevedore in the U.S. The multi-year contract includes the service of existing rugged computer hardware for optimal performance and the sale of the new Duros 1214 fixed-mount rugged computers.

Ports America relies on rugged computers to help manage and track cargo inventory at 50 ports and 97 terminals in the United States and Mexico. The Duros 1214, which is engineered to withstand the rigors of shipping environments, will be mounted onto pick-up trucks and various industrial machinery throughout the ports.

Sealed to IP-65 and meeting or exceeding MIL-STD-810F, the Duros 1214 also features an ultra-rugged touch screen Polysilicon display and all-in-one aluminum housing.

“Ports America plays an essential role in ensuring that our nation’s ports operate efficiently and maintain the flow of commerce globally,” said Eric Miller, general manager for Duros. “Our experienced technicians understand the importance of reliable equipment in their complex operations, and we are looking forward to providing them with a superior level of service and quality products.”

“Supply Chain Services strives to improve our customers’ bottom line by introducing a solution that meets and exceeds their demands, creates ROI, and lowers their total cost of ownership. We’re able provide an effective ROI, while maintaining data integrity that is second to none with the use of the 1214 rugged and reliable device,” said David Green, chief operations officer for SCS. “We’re proud to endorse and work with the Duros team to ensure that these efficiencies are met for Ports of America.”

About Duros:

Duros is one of three product lines of RMT Inc., the leading provider of fully rugged, highly customizable hardware solutions for challenging environments. Engineered by JLT, Duros’ vehicle-mounted terminals and tablet computers provide ultra-rugged computing solutions for the roughest situations. Duros is based in Tempe, AZ. Visit www.durostech.com.
